

Off-line installation, GCDkit 6.1 and higher

[simplified version, installer packed with all libraries needed]

R installation

1. Install **appropriate version of R (R-4.1.3-win.exe)**. Importantly, go for custom installation and select “sdi”.

GCDkit installation

2. Copy all the installation files into some temporary directory, together with the installation script “@OFFLINE_INSTALL.r”
3. Open the 32-bit version of R (shortcut named e.g., “R i386 4.1.3”) and drag and drop the file “@OFFLINE_INSTALL.r” into the R Console window.
4. Gain administrating rights, if you can. Otherwise no shortcut is created on your desktop.
5. If you are installing without admin rights, and if asked whether you like to create Personal library, answer Yes.

Running GCDkit

6. Double click the GCDkit 6.1 icon
7. Optionally, start R, go to menu “Packages | Load package” and select “GCDkit”.
Stopping – if question whether you like to save the workspace appears, reply “No”

[Optional] Setting up the shortcut on your desktop

8. Copy and rename the existing shortcut to R (e.g., “R i386 4.1.3”)

Right click the icon, select *Properties* according to your system

Target:

`"%GCDKIT_RHOME%\bin\i386\Rgui.exe" --silent --no-save -sdi`

e.g., `"C:\R\R-4.1.3\bin\i386\Rgui.exe" --silent --no-save -sdi`

Run in:

`"%GCDKIT_HOME%"`

e.g., `"C:\R\R-4.1.3\library\GCDkit"`

or in Personal library such as:

`C:\Documents\R\win-library\4.1\GCDkit`

In the same directory are prepared also several icons that you may like to use.
